

Cloud Environment & Service Endpoint Inventory

Technical Design Document (TDD)

#	Service Name	Azure App Service Name	Environment URL	Status
1	NewDoor.DeviceSimulator	NewDoor-Simulator	newdoor-simulator.azurewebsites.net	
2	NewDoor.Gateway.Api	NewDoor-DeviceHub	newdoor-devicehub.azurewebsites.net	
3	NewDoor.Listener	newdoor.NewDoor.Listener	newdoor-listener.azurewebsites.net	
4	NewDoor.Workflow.Orchestrator	newdoor-orchestrator	newdoor-orchestrator.azurewebsites.net	
5	NewDoor.Processor.Runtime	newdoor-processor	newdoor-processor.azurewebsites.net	
6	NewDoor.Action.Dispatcher	newDoor-actionengine	newdoor-actionengine.azurewebsites.net	
7	NewDoor.API	newdoor.api	https://newdoor-api.azurewebsites.net/swagger/index.html	Ready
8	NewDoor.Web	newdoor.web	newdoor-web.azurewebsites.net	

Environment Summary

Platform Name: NEWDOOR

Environment Type: Hackathon / P1 Development Environment

Cloud Provider: Microsoft Azure

Hosting Model: Azure App Services

Architecture Style: Event-Driven Microservices Platform

Core Platform Flow

Device Simulator → Gateway API → Listener → Workflow Orchestrator → Runtime Processor → Action Dispatcher → API/Web Dashboard

Notes

- All services are independently deployable Azure App Services.
- Platform follows distributed event-driven architecture principles.
- Services are designed to support future Kafka/event-stream integration.
- Current environment represents the initial P1 hackathon deployment foundation.
